Case Study

HRS Off Boarding Process

Client Profile

Client is a German based leading financial institution.

Challenges

The scope of project is to build a system for automating Off-boarding process for employees. The main challenges were creating the complex workflow and complex AJAX form with database service integration in each form. The project consists of one main process and a checklist process. Main process consists of approval from manager and Off-boarding team whereas checklist process consists of approval from 13 departments.

Aufait Solution

Modeling and designing complex workflow.

- Integration with Oracle DB.
- Design of complex AJAX forms.
- Web services integration in AJAX Forms.
- Integration of checklist process in main process.
- Sending notification and escalation mail based on SLA.
- Changing reminder/escalation date time based on the Last working day (LWD) of employee.
- Report integration in Intalio UI.
- Handling complex process in production.
